

Name: DJEUDJAM VERANE

12th March, 2013.

Course code: CEF 308

Course title: Internet Programming and Multimedia Systems

Course master: Mr. NGATCHU Damen

Project : HOTSPOT LOGIN SYSTEM

Definition:

The project is aimed at creating a hotspot login interface for which members and non-members can use, that is members have accounts and non-members can just get buy a login account time.

Implementation Methods:

The project will need knowledge of HTML, CSS and JavaScript for building the pages together with the formatting. PHP together with MySQL for the backend database.

Users:

Everybody can be a user but there are two categories: the members and non-members.

Functionalities:

- Both members and non-members can have access to advertisements.
- They should also have access to their login status that is remaining time

Conclusion:

This project will help develop a better login interface using recent web technologies.
